

# PREDICT-ORTHO STUDY

Invitation to participate

Dear Colleagues,

In amidst of the pandemic, there has been no better time than now for surgeons to **collaborate** to help us understand the pandemic. In response to COVID-19, the **COVERT Collaborative** has come together with **PanSurg** to solely represent their **Trauma and Orthopaedic arm**. Both collaboratives have been endorsed by the **Royal College of Surgeons of England** and are **members of their COVID Research Group** ([www.rcseng.ac.uk/coronavirus/rcs-covid-research-group](http://www.rcseng.ac.uk/coronavirus/rcs-covid-research-group)).

Continuing on the success of our publications, we are now expanding our work to reach every corner of the world. We have been working tirelessly since the dawn of this unprecedented global crisis, by studying the evolution of the virus and its impact on the speciality. We are observing for trends on patient care, patient safety and to predict prognosis. Yet this is cannot be done without your help.

We invite you to play your part. All you need to do is to register in order to start submitting your data. In return for your contribution, we will offer you **collaborative authorship on journal publications**. You will be part of exciting international research!

Please do not hesitate to contact us with any queries or for further information at [ortho@pansurg.org](mailto:ortho@pansurg.org). **Everyone is welcome and will be recognised for their efforts!**

**AIM:** To build risk prediction tools to provide surgeons with more accurate estimates regarding the potential risk of death or complications in their patients with or without COVID-19.

## WHO CAN PARTICIPATE?

Orthopaedic surgeons across the world
